DoD Directive 5230.24, "Distribution Statements on Technical Documents," 18 Mar 87, contains seven distribution statements, as described briefly below. Technical documents **MUST** be assigned a distribution statement

- ☒ DISTRIBUTION STATEMENT A: Approved for public release. Distribution is unlimited.
☐ DISTRIBUTION STATEMENT B: Distribution authorized to U.S. Government Agencies only.
☐ DISTRIBUTION STATEMENT C: Distribution authorized to U.S. Government Agencies and their contractors.
☐ DISTRIBUTION STATEMENT D: Distribution authorized to U.S. Department of Defense (DoD) and U.S. DoD contractors only.
☐ DISTRIBUTION STATEMENT E: Distribution authorized to U.S. Department of Defense (DoD) components only.
☐ DISTRIBUTION STATEMENT F: Further dissemination only as directed by the controlling DoD office indicated below or by higher authority.
☐ DISTRIBUTION STATEMENT X: Distribution authorized to U.S. Government agencies and private individuals or enterprises eligible to obtain export-controlled technical data in accordance with DoD Directive 5230.25, Withholding of Unclassified Technical Data from Public Disclosure, 6 Nov 84.

2d. Reason For the Above Distribution Statement (In accordance with DoD Directive 5230.24)

Originators deemed the information unclassified and suitable for public release

UNCLASSIFIED

INTRODUCTION

1. PURPOSE. Clothing Almanacs show monthly requirements for items of military clothing to be used in a particular region by troops operating under combat conditions. They are intended to aid logistic planners; from them it is possible to determine monthly clothing needs, probable amounts of use and wear of the items, and requirements for item replacement.

a. Distribution. The Almanacs are distributed for guidance to theatre, Army, and other commanders responsible for authorizing the issue of discretionary items, and for information to commanders of posts, camps, stations, and divisions or equivalent organizations.

2. DESCRIPTION. Clothing Almanacs supplement T/A 21, which specifies total yearly clothing allowances for each of seven world-wide zones. Each T/A 21 Clothing Allowance Zone is based on the average temperatures of the coldest and warmest months, as shown in Table 1.

TABLE 1: CLOTHING ALLOWANCE ZONES OF T/A 21

Zone	Average Temperature (°F) of	
	Coldest Month	Warmest Month
I Tropical	Above 68 . . .	Above 68
II Semitropical	50 to 68 . . .	Above 68
III Warm Temperate	32 to 50 . . .	Above 68
IV Mild Temperate	32 to 50 . . .	50 to 68
V Cool Temperate	Below 32 . . .	Above 68
VI Cold Temperate	14 to 32 . . .	50 to 68
VII Arctic	Below 14 . . .	Below 68

For each zone, T/A 21 lists the items that are required or mandatory. It also lists for each zone the items that are discretionary. (Discretionary items are not required by all personnel within the respective zones, but they are essential to the operating efficiency of certain personnel because of duty assignments which may involve greater exposure to environmental conditions.) Within the framework of T/A 21, Clothing Almanacs show monthly clothing requirements in specific regions, indicating essential items in these regions.

a. Basis. Clothing Almanacs are based on a detailed study of local environmental conditions. Each Almanac specifies the clothing most likely to be needed by troops for adequate protection against these conditions during round-the-clock operations. Of primary concern in preparing an Almanac is the amount and kind of clothing a soldier needs while he is in the field engaged in relatively light activity. Troops engaged in strenuous

activity need less clothing; troops completely at rest require more to remain comfortable. Clothing Almanacs show the items that will give troops adequate protection for at least 90 percent of the time, and in an average year any particular item can be expected to be used at least 30 percent of the time during the months specified.

b. Regions. Clothing Almanacs are issued for particular regions (e.g., Alaska, Japan, Northeast Africa, etc.) which include parts of one or more T/A 21 Clothing Allowance Zones. Each Clothing Almanac Region is further subdivided into a number of Clothing Requirement Areas, according to differences in monthly clothing requirements. Although all Clothing Requirement Areas within any one of the T/A 21 Clothing Allowance Zones have the same basic annual clothing allowances, they differ in monthly clothing needs.

(1) Clothing Requirement Areas are of two types, nonmountainous and mountainous. The latter are given a special designation to indicate that field conditions and, consequently, clothing requirements may change rapidly within a relatively short horizontal distance. The mountainous areas are divided into elevation intervals, each of which has different clothing needs. Thus, in effect, each interval represents a Clothing Requirement Area and clothing needs of troops operating within mountains can be determined for any elevation.

(2) Each Clothing Requirement Area is assigned an identifying symbol. Nonmountainous Areas are designated by Roman numerals of the Clothing Zones in which they exist, together with an identifying letter (e.g., VII-A). Mountainous Areas are designated by the Roman numerals of the Clothing Allowance Zones of their lowest elevations, together with an identifying number (e.g., VI-2). Although Clothing Requirement Areas in different Clothing Almanacs may have identical designations, they do not necessarily have the same environmental conditions or monthly clothing requirements. For example, monthly clothing requirements in Eastern U.S.S.R. VII-A are not necessarily the same as those in Western U.S.S.R. VII-A.

c. Map. A map of the Region showing its Clothing Requirement Areas is included in the back of the Almanac. Distinctive boundaries separate Clothing Allowance Zones; single line boundaries separate the individual Clothing Requirement Areas. Each Area is numbered according to the system outlined above.

d. Tables. For each Clothing Requirement Area or mountain elevation interval there is a table in the Clothing Almanac. Months are shown along the top, and the clothing items are listed on the left-hand side of the page. Need for an item is shown by a solid bar drawn opposite the item and in the proper month-column. The absence of such a bar means that the item is not needed in that month. For each mountain interval, elevations in feet above sea level are given at the top of the page.

e. Items Listed. All items listed in the clothing tables are authorized in T/A 21, Mobilization, 26 January 1950, for the respective zones. In the tables, these items have been grouped and arranged alphabetically under the headings of Body Clothing, Footgear, Handgear, Headgear, and Sleeping Equipment. For many items, model numbers, shade numbers, etc., have been eliminated to conserve space.

(1) Both discretionary and mandatory items are included in the tables. Discretionary items are indicated by an asterisk (*).

(2) Clothing Almanacs do not specify the requirements for specialized equipment. Issue of Specialized Individual Equipment for low mountain and alpine areas, as listed in T/A 21, Part III, Section II, may be authorized by the commanding general, theater of operations, or by the Department of the Army for individuals undergoing special training in continental United States. Boots, ski-mountain are considered specialized in that they are to be worn primarily by trained ski troops or specially equipped mountain troops. When worn with the proper sockgear, these boots are satisfactory for use with skis at temperatures as low as -22°F; they are not suitable for use with snowshoes. For climbing steep rocky slopes, they may be preferred at moderate to high temperatures over the Boot, service, combat, russet, and at lower temperatures over Shoepacs; the latter, however, are generally preferred for climbing wet or snow covered slopes.

(3) Certain items which are mandatory throughout the world, such as Drawers, cotton and Belt, waist are not included in the tables.

(4) Also excluded are items in the nature of equipment rather than clothing: insignia, toilet articles, knives, snowshoes, tents, steel helmets, etc.

(5) Under the heading "Anti-Insect" need is indicated for: Gloves, mosquito; Headnet, mosquito; Bar, insect, field; and Repellent, insect.

a.

In the rugged mountains of northeastern U.S.S.R. (the Khrebet Cherskogo, southeast of Verkhoyansk, shown in this air photograph), specialized mountain equipment is required in addition to items listed in the Table for Area VII-4.

b. In the Commander and Kuril Islands, cold-wet weather and waterlogged ground, shown here on Ostrova Beringa, necessitate the use of Shoepacs and Parka and Trousers, wet weather, as listed in the Table for Area VI-1.

~~CONFIDENTIAL~~

CLOTHING ALMANAC FOR EASTERN U.S.S.R.

UNCLASSIFIED

1. GENERAL

All of U.S.S.R. east of the Yenisey River, with adjacent Pacific and Arctic islands, falls within this Clothing Almanac Region. This vast region has been divided into 13 Clothing Requirement Areas of differing clothing needs. Even within each Clothing Requirement Area conditions vary greatly from place to place and from year to year. For most areas, therefore, the Clothing Tables prescribe more than one item intended for the same general purpose. For example, two or more kinds of footwear or two or more kinds of outer jackets may be required during the same month. Section 2 provides information to aid in judicious choice between such items. First, a general picture of the geographical factors of the region is presented, including a discussion of location and size of the region, landforms, climate, and surface conditions (including vegetation). Finally, the clothing combinations or assemblies imposed by these factors are summarized in terms of general winter and summer wear.

2. GEOGRAPHICAL FACTORS

a. Location and Size -- Eastern U.S.S.R. is situated in eastern Asia almost entirely north of 50°N latitude, and is roughly equal to the United States in area. It extends more than 3,000 miles, from 85°E to 168°W, about as far as from New York to San Francisco.

Compared to the United States, however, Eastern U.S.S.R. is isolated. Ice-bound on the north for 8 to 10 months of the year, and flanked by a wide zone of rugged complex mountains on the south and east, Eastern Siberia is cut off from easy access most of the year except by way of the southeast and southwest. There is a relatively ice-free sea approach to Vladivostok and vicinity, and a land approach followed by the Trans-Siberian Railroad over the open plateau of Central Siberia from the West Siberian Plain to Ozero (Lake) Baykal.

b. Landforms -- The mountainous and upland character of Eastern Siberia is indicated in the illustration (facing page).. The most conspicuous feature of the region is the vast belt of mountains, arranged irregularly, but generally trending northeast-southwest, which form a mountain border from the Anadyr Peninsula in the northeast to the Yenisey River in the southwest. A rough plateau north and west of the mountain border forms the land surface of central Eastern Siberia. The overall picture is one of an elevated platform, dipping gently toward low-lying plains on the north and west, and with upturned and folded margins on the south and east. Several rivers, including the Lena, seventh longest in the world, flow northward upon this tilted platform and empty into the Arctic basin. The Amur, sixth longest river in the world, flows through the southeastern portion of the region and empties into the Sea of Okhotsk.

~~CONFIDENTIAL~~

UNCLASSIFIED

c. Climate -- All of eastern U.S.S.R. lies within Clothing Allowance Zone VII, except for the Kuril Islands and Ostrova Komandorskiye which are in Zone VI. The Zone VII climate is extremely continental, with very cold winters, mild summers, and light precipitation.

(1) Temperature. This region contains the "cold pole" of the earth, where the lowest temperatures on the earth's surface are recorded, (Verkhoyansk has recorded an official temperature of -90°F). Winter temperatures vary considerably from place to place within this region. Mean temperatures of January and/or February, the coldest months, vary from -58°F at Verkhoyansk in the interior to about 10°F at Vladivostok (which has a climate similar to that of Belle Isle, Newfoundland) in the southeast coastal section.

Along the Arctic Coast mean temperatures in winter are not as low as in the interior. Mys (Cape) Chelyuskin has a mean temperature of -20°F in January, and Nizhne-Kolymsk a mean temperature of -40°F . Freezing temperatures occur in all seasons along the Arctic Coast and on 150 to 200 days (October to May) in the southeast. The Kuril and Commander Islands, under maritime influence, do not have extremes of temperature as great as in other areas of Eastern U.S.S.R. Average temperatures in January and/or February, the coldest months, are 10° to 20°F . The lowest temperatures recorded are -10° to -20°F .

The low winter temperatures experienced in Eastern U.S.S.R. are of great significance to the combat soldier in the field: he must translate them into terms of how long he can stay warm, or what measures he must take to stay warm. At low temperatures an inactive man (standing guard duty, for example), cannot maintain his normal body temperature indefinitely even in the warmest clothing available. At -20° or -40°F , temperatures that occur frequently in most of this region in winter, he loses heat rapidly.

A serious winter problem in all areas, except perhaps in the Kuril and Commander Islands is condensation of evaporated body moisture. When water vapor is absorbed by a slightly colder layer of clothing near the skin, it condenses. This wetting greatly increases when one is active and the clothing "insulation" value -- the ability to slow down heat loss -- is reduced. In the field it is essential to dispose of the moist air next to one's body by periodic ventilation -- forcing the moist air out at the waist or collar. At low temperatures this may cause momentary discomfort, but it is absolutely necessary. Condensation of body moisture in clothing can chill the body as much as low temperatures and wind.

For best protection against extreme cold, a soldier must know how to use his clothing as effectively as possible, and how to guard against over-exposure. (See TM 10-275: Principles of Cold Weather Clothing and Equipment.)

Mean summer temperatures vary from 30° to 40°F along the Arctic Coast, and 60° to 70°F throughout most of the rest of the region. Mys Chelyuskin on the Arctic Coast and Yakutsk in the Lena Basin have mean temperatures

of 35° and 66°F, respectively, during July, the warmest month. The Kuril and Commander Islands have mean summer temperatures of 35° to 50°F.

(2) Wind. Strong winds occur over most of the region on an average of 10 to 25 times each year, but expectancy will vary from year to year and from location to location. On the Kuril and Commander Islands strong winds are more frequent. Shana, on Etorofu-shima, reports over 150 days each year with gales (34 mph or greater).

Loss of body heat in cold weather increases with an increase in wind velocity, and cold weather seems colder when a wind is blowing. Most people recognize this fact but few realize just how important "wind-chill" can be. For example, a 20-mph wind with a temperature of 5°F is just as effective in cooling a man's bare skin as is a 2-mph wind at -40°F. Fortunately, calm or near calm conditions are generally associated with the low winter temperatures, so that the severity of the cold is not as great as anticipated. However, with the occurrence of the buran or purga (Siberian blizzard) troops may be extremely uncomfortable and may even freeze if no shelter is available.

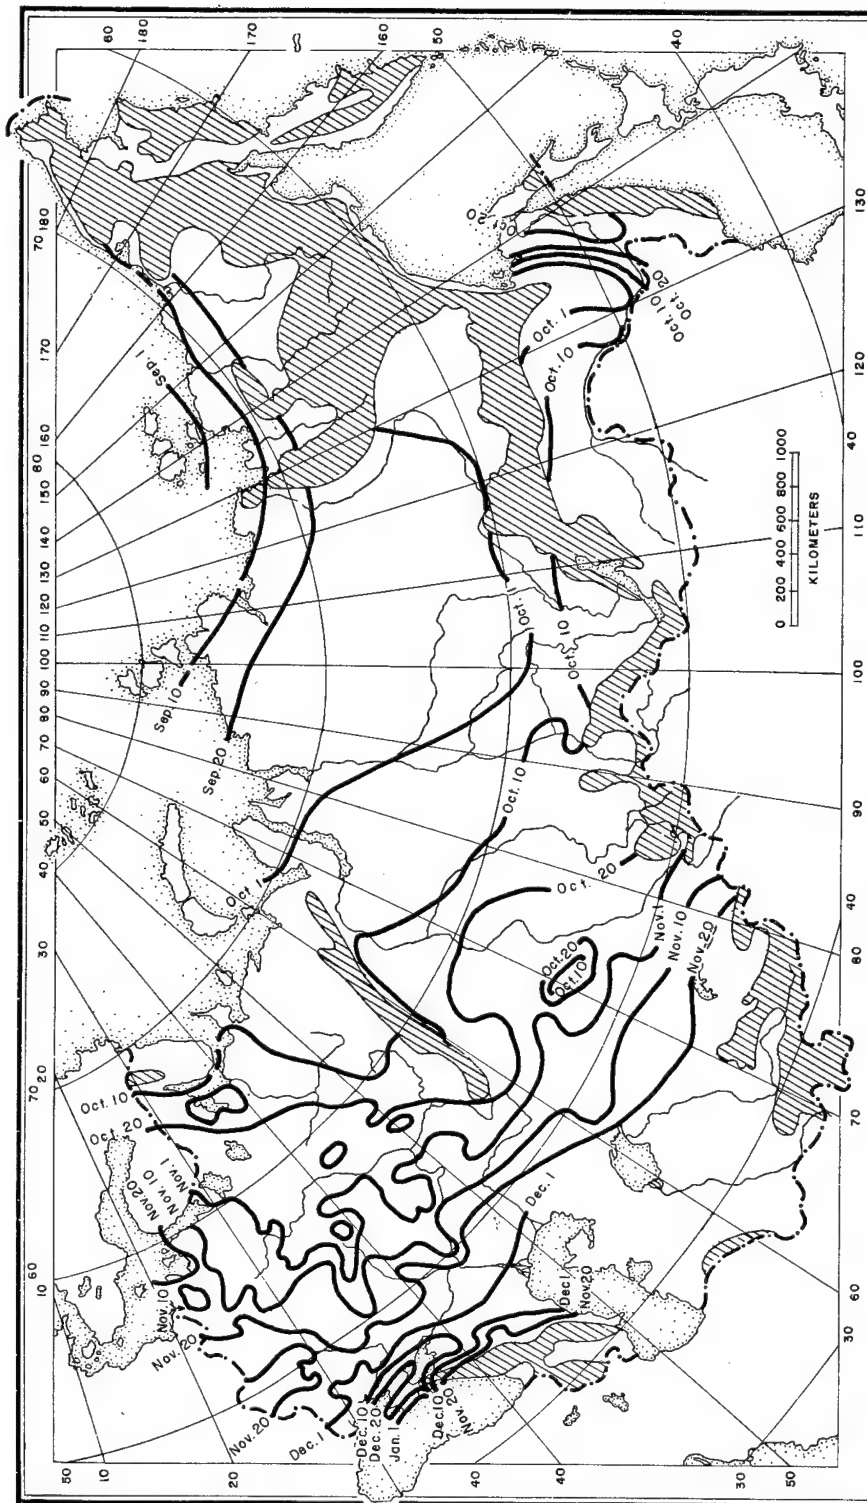

Wind-blown snow can also be dangerous to troops. Fast flying snow crystals feel like needles on the face, and when they are forced inside one's clothing and melted by the heat from the body, they reduce the effectiveness of the clothing in keeping one warm.

(3) Rainfall and Snowfall. Owing to the low temperatures that prevail most of the year, and the lack of an adequate supply of moisture, very little precipitation (generally 5 to 15 inches annually) falls in most of this region. Precipitation is heavier in the southeast: Sakhalin has about 25 inches, and the Kuril Islands have 40 to 60 inches per year.

In most areas summer is the "rainy" season in Eastern Siberia. The southeast, however, receives almost as much precipitation in fall as in summer. Vladivostok, with an annual mean of 25 inches, receives 13 inches in summer and 9 inches in fall; and the Kuril Islands, with abundant precipitation all year, have largest amounts in late summer and fall.

Winter precipitation is light in most of Eastern U.S.S.R. and occurs in the form of snow. Snow covers the ground for about three months in the southeast to about nine months in the far north, and even longer in the mountains. (Figs. 1 and 2). Snow depths of more than two feet on the level are encountered in most winters in the western portion of the region, while in the south central portion (lower levels of Area VII-7) depths are usually below four inches.

(4) Mountain Climates. Highland areas are extensive and complex in Eastern U.S.S.R. Although detailed climatic information is lacking, some general conclusions may be stated. The highlands in winter ordinarily

will require the same basic clothing as the adjacent lowland areas for protection against cold. A longer cold season may be expected at higher elevations. In areas of rough terrain, special clothing and equipment will also be required, depending upon elevation and local differences in exposure (Fig. 3a).

In the clothing tables for mountain areas, each area is divided into elevation intervals, with differing clothing requirements. For example, Area VII-5, comprising mainly Khrebet Gydan (Kolyma Mountains) is divided as follows: up to 1,500 feet; 1,500 to 4,000 feet; and above 4,000 feet.

Ground conditions change radically from winter to summer throughout most of Eastern U.S.S.R. There is little or no sunshine during the long winter, but abundant sunshine during the long summer days. In winter, the frozen ground, commonly snow-covered, remains firm and effectively dry, but in spring and summer, after the thaw begins, the ground becomes soft and moist. Under such varying surface conditions, footgear requirements change correspondingly.

(1) Summer Conditions. Trees are conspicuously lacking in the far north of Eastern Siberia, sections of Kamchatka, the northern islands, and most mountain peaks. Whether covered with grass or lichens, as on some Arctic lowlands, or bare of vegetation, as on the rock surfaces of some mountain tops, such treeless expanses are commonly referred to as "tundras" in the U.S.S.R. Along the Arctic coastal plains, tundra forms a northern continental margin about 100 to 200 miles wide. Low-growing vegetation, composed of grasses, mosses, and lichens, forms a spongy surface matting. Bushes and shrubs are found in river valleys. Peat bogs and swamps are numerous, and thousands of shallow lakes dot the surface.

Many northward flowing rivers rise sharply during the spring thaw period, and inundate vast lowland areas. Although it has little precipitation, summer is a season of wet, waterlogged conditions because drainage does not penetrate below the upper limit of the underlying permafrost. The ground is so soft in many places that one may sink halfway to his knees with every step. (See illustration facing page 1.)

South of the treeless tundra, discontinuous stands of stunted coniferous trees form a patchwork of tundra and forest, and still farther south the forest proper (taiga) of Eastern U.S.S.R. is encountered (Fig. 3). Composed in large part of larch, fir, and in the south, pine, this forest forms a continuous cover over the Central Siberian Plateau, and a discontinuous cover, mostly confined to lower slopes, in the mountainous areas. Only in the maritime areas of the southeast is the composition of the forest radically different. Here, deciduous trees grow intermingled with the conifers of the taiga to form a dense mixed forest. In addition, there are sizeable areas of open farmland in the south.

The forest floor, composed of duff and peat, is wet, soft, and somewhat yielding to the foot. During spring, melting snows make the forest floor

Figure 3a.

In the farmland area of Eastern U.S.S.R., such as illustrated by this scene southwest of Ozero (Lake) Baykal in Area VII-8, woolen clothing is required even in summer.

Figure 3b. Winter in the taiga forest of southern Kamchatka, Area VII-2, calls for Very Cold Weather Clothing.

more moist than in summer. Peat bogs and small lakes may be encountered anywhere within the taiga but are more numerous in the north than in the south. In general, trees of the well-developed taiga are tall and widely spaced, and there are few undershrubs to hinder movement by men. Where the taiga is poorly developed, as on some mountain slopes and in parts of the northern taiga, stands of stunted trees, often in the form of dense bushlands, are nearly impenetrable.

Throughout Eastern U.S.S.R. wet ground conditions necessitate the use of Shoepacs for 6 months (Clothing Requirement Area VII-A) to 9 months (Area VII-E). Both Shoepacs and other items of footgear, such as Boots, service, combat, russet, are indicated as required simultaneously in many Clothing Requirement Areas. If only one of these two items is to be issued, most frequently it should be Shoepacs, to provide better protection against trench foot and other foot ailments caused by cold-wet surface conditions. Men whose activities are confined to barracks duty may need only Boots, service, combat, russet, but for field operations troops frequently will encounter cold and wet surface conditions which will keep footgear wet for much of the time; under such conditions, Shoepacs provide better protection than any all-leather item of footgear.

Insects are a problem throughout Eastern U.S.S.R. during summer, when temperature and water conditions favor their development. Hordes of insects can make life extremely uncomfortable unless precautionary measures are taken. Mosquitoes, black flies, and sand flies comprise the pestiferous element of the insect population. In the tundra and northern taiga, the mosquito in particular is a problem during the few warm summer weeks. Four anti-insect items are listed as required during this period: Gloves, mosquito; Headnet, mosquito; Bar, insect, and Repellent, insect. Individual preference varies greatly with respect to these items. Some prefer to use only the Repellent, insect, while others choose the Headnet, mosquito and Gloves, mosquito. If the efficiency of troops is to be maintained while they are engaged in outdoor activity during summer in this region, protection against insects is essential.

(2) Winter Conditions. After the winter freeze commences, the land surface becomes hard and unyielding. Except in the area of heavy snowfall in the mountains of Poluostrov Kamchatka (Kamchatka Peninsula) and vicinity, the surface is mantled by thin snows. Figures 1 and 2 show the dates of the beginning and ending of continuous snow cover in the various parts of U.S.S.R. The winter freeze and snow cover begin earlier and end later in the north than in the south and Pacific maritime areas. Along the Arctic coast rivers remain ice-bound more than 260 days per year, but the Amur River in the south remains ice-bound for less than 200 days per year.

Winter replaces summer rapidly in the northern tundra. Streams, bogs, swamps, and lakes freeze quickly. The freeze penetrates to a considerable depth and the surface is soon capable of supporting the

weight of vehicles. The snow cover is uneven and discontinuous. Many exposed areas are swept bare by the wind, and sheltered areas are characterized by drifts. Although intensely cold, winter is the best season for transportation on the tundra. Cross country travel is facilitated by favorable surface conditions.

Within the taiga (Fig. 3b) the tree cover greatly reduces wind speeds, snow drifting is uncommon, and snow-free surfaces are few.

Wherever a fairly continuous snow cover prevails, the Parka and Trousers, field, overwhite should be used by troops as camouflage. When snow cover is not continuous and in heavily wooded areas the use of camouflage clothing will be at the discretion of the field commander.

Sun glasses or goggles are essential for protection against the effects of snow glare whenever a snow cover prevails. In the Arctic regions the need for eye protection is greatest in late winter and early spring.

When the average temperature of any month is below 14°F (6 months in Area VII-A; 3 months in Area VII-E), a choice must be made between two types of footgear: Boots, Arctic, felt and Boots, mukluk. These differ considerably in insulation value and function. Boots, mukluk provide greater warmth, Boots, Arctic, felt are next. The felt boot and mukluk will not stand up in extremely rugged terrain, but the felt boot can be used to some extent with crampons and skis. At temperatures below about -20°F the felt boot or mukluk is essential (Fig. 4).

3. CLOTHING SUMMARY

Items required for troops under combat conditions in this region can be summarized in three groups: very cold weather clothing, cold weather clothing, and cool weather clothing (Table 2). Garments mandatory for all zones, such as Drawers, cotton, shorts, od, are not included in the tables. Each group includes more items than can be worn at any one time; from the listed items proper selection can be made within the indicated climatic range. Actual selections depend upon whether temperatures are near the colder or warmer limits, and upon differing conditions of moisture or terrain. The Clothing Requirement Tables in the back of this almanac must be used for selection of specific items for given months in given areas. In a given year, however, weather may be unusually warm or unusually cold, with resulting variation in clothing needs.

Very Cold Weather Clothing is required in winter throughout the region wherever the mean monthly temperature is below 14°F, and sometimes up to 23°F when there is excessive wind-chill. In the lowlands, this group of clothing is needed for periods ranging from eight months in the far north to two months in the Kuril Islands. In the higher levels of the mountains it is needed as much as ten months.

 Cap, field, cotton, od, w/visor
 Bag, sleeping, wool
 Blanket, wool, od
 Case, water repellent, bag, sleeping
 Anti-Insect items

In summer throughout Eastern U.S.S.R. except the far north, mean monthly temperatures range between 50° and 68°F. Cool Weather Clothing (Table 2) is required for periods of two to five months under these conditions. The weather is seldom hot enough to make woolen clothing uncomfortable.

During summers in the far north (Areas VII-A and VII-1) and in the mountains, and during spring and autumn elsewhere, Cold Weather Clothing is required. Clothing selected from this group provides adequate protection from most climatic stresses likely to occur between monthly mean temperatures of 14° and 50°F.

4. SUPPLEMENTARY ARMY PUBLICATIONS

Information concerning the construction, function, manner of wear and approved method of care of each item of clothing may be found in one or more of the following Army publications:

a. FM 31-70: Arctic Operations (March 1949). Chapter 3, Clothing and Individual Equipment, summarizes the general principles of cold weather clothing and describes many of the clothing and equipment items designed for use in the Arctic and Sub-Arctic.

b. TM 10-275: Principles of Cold Weather Clothing and Equipment (October 1944). The proper use, care, and maintenance of cold weather clothing and equipment are discussed for the principal items protecting the body, the feet, the hands, and the head. The principles of insulation on the layer basis, proper fitting and sizing of clothing, the importance of clean and dry clothing, and the relationships between body activity and clothing amounts are emphasized. Specifications are furnished as to the actual temperatures when certain outer protective items of clothing and equipment are to be worn.

c. TM 1-240: Arctic Manual. (January 1944). Chapter 4, Clothing and Equipment, generalizes the information contained in TM 10-275 (October 1944) with special emphasis on problems of the arctic environment. A section on summer clothing, p. 125, indicates the problems of insects, wet ground surfaces, and the very variable climatic conditions.

d. FM 70-15: Operations in Snow and Extreme Cold (November 1944). Chapter 3, Clothing, is a generalization of TM 10-275. Chapter 5, Snow Shoes; Chapter 6, Skiing; and Chapter 9, Equipment, are of special interest.

e. FM 70-10: Mountain Operations (September 1947). Chapter 1, General Considerations; Chapter 4, Conditioning and Acclimatization; Chapter 6, Weather; and Chapter 7, Winter Characteristics, discuss the relationship between the soldier and the mountain environment.

f. FM 21-15: Individual Clothing and Equipment (April 1945). Emphasis is placed on the care of clothing and equipment and methods of assembling and packing.

g. TM 10-228: Fitting of Shoes and Socks. (February 1946). The importance of proper shoe fitting methods, foot measuring equipment and procedures, sock fitting and size correlation, and size data for boots and shoes including approved sock combinations, are the more important sections of this manual.

h. Films and Film Strips:

(1) FS 10-142 (1944) Cold Weather Clothing - Part I: Principles.
(2) FS 10-143 (1944) Cold Weather Clothing - Part II: Body Clothing.

(3) FS 10-144 (1944) Cold Weather Clothing - Part III: Footwear.
(4) FS 10-145 (1944) Cold Weather Clothing - Part IV: Handwear and Headgear.

(5) MISC. 1344 (1947) Task Force Williwaw. Cold weather tests of personnel and equipment in the Aleutian cold, wet climate.

(6) MISC. 1360 (1948) Task Force Frigid. Cold weather tests of personnel and equipment in Alaska at 60°F below zero.

(7) MISC. 1331 (1947) Exercise Polar Bear. A record of man and machines versus nature. Transportation problems encountered by a military maneuver in the far north.

(8) MISC. 1332 (1947) Exercise Eskimo. Records specific information regarding the effects of extreme cold and snow on a combined military exercise in the snow-swept reaches of Northern Canada during the winter of 1944-45.

(9) MISC. 1337 (1947) Exercise Musk Ox. Shows a Canadian Army expedition on an exercise through the territory from Churchill over to Coppermine, on to Port Norman and down the Alaskan highway. Deals with clothing and equipment under environmental stresses.

5. OTHER CLOTHING ALMANACS

The following Clothing Almanacs cover areas adjacent to Eastern U.S.S.R.:

- No. 1. Japan (1945)
- No. 2. Alaska (1950)
- No. 6. Western U.S.S.R. (1950)
- No. 10. China and Korea

6. CLOTHING REQUIREMENT TABLES

The following 33 tables, showing monthly field requirements for clothing, sleeping equipment, and insect protection, are arranged chronologically by Clothing Allowance Zones (VI followed by VII) and Clothing Requirement Areas (VII-A, VII-B, etc.).

Tables for mountain Areas follow those for lowland Areas (lowland Area VII-E followed by mountain Area VII-1), and tables for the different levels within each mountain Area are arranged in order of increasing elevation.

The location of each Area covered by a Clothing Requirement Table is shown on the folding map in back.

The preceding text provides information to assist in selection of items for protection against special or local environmental conditions.

FIELD CLOTHING REQUIREMENTS

EASTERN U.S.S.R. VI - I (below 1500 ft.)

	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
BODY CLOTHING
